

Private Property Inflow/Infiltration Reduction Lateral Rehabilitation Program

I&I is clean storm and/or groundwater that enters the sewer system through cracked pipes, leaky manholes, or improperly connected storm drains, down spouts and sump pumps. Most **inflow** comes from storm water and most **infiltration** comes from groundwater.

There are over 430,000 lineal feet of sewer pipe within the Village of Shorewood's borders. About 160,000 feet are owned and maintained by the Village of Shorewood and the Metropolitan Milwaukee Sewage District.

Each year the Village and MMSD invest heavily in programs to remove I&I from the public portion of the sewer system. What can homeowners do about the remaining 2/3 of the system?

Line your sewer lateral!

Actual photo of the lateral access hole.

Lateral lining completed; awaiting topsoil and seed.

The 2017 program will focus on the 4000 - 4200 blocks of N. Larkin Street. To date, 224 of your neighbors have participated in this **FREE** program.

I am so pleased the Village of Shorewood is proactively addressing Infiltration/Inflow of storm water into the sanitary system. It was an easy decision to participate in the private property lateral lining program as I essentially got a "new sewer" to benefit both my property value and the Villages objectives of reducing I&I. I was very satisfied that there was very little disruption to my yard and the Village was timely in restoration of areas disturbed during the work.
